Price 25 cents; \$4 per year. Now is the time to subscribe.

Two copies sent for a year to one address for

Three copies sent for a year to one address for

Sample copy sent on receipt of 15 cents.

SHIELD & COMPANY,
No. 458 and 500 Broadway, New-York.

In Press and will be ready shortly.

AGRICULTURE. A BOOK FOR EVERY FARMER.

THE ELEMENTS OF AGRICULTURE.
By G. B. WARING, Jr.

Author of *Draining for Profit and Drainage for Health.*

Formerly Agricultural Engineer of the Central Park, New-York.

Revised Edition.

This book was first published about 15 years ago, and was more largely sold than any book of the same character ever brought out in America.

It has now been carefully revised in the light of the latest discoveries of Agricultural Science, and is cordially recommended to every farmer, young or old, who would understand the simple principles on which his success must depend.

It is written in a style so simple that it will be readily understood by all, and while interesting as a treatise into the simplest English, of which it is one of the greatest importance to the farmer, has hitherto been clothed in technical language as to be practically inaccessible to him.

The chapters on Manure will be accepted by all as a clear statement of the principles which underlie the production and use of the most common fertilizers, and will be found most valuable to the practical farmer.

If a copy of this book could be placed in the hands of every farmer in the land it would add largely to the welfare of the whole country.

PRICE ONE DOLLAR.

Published and for sale at the office of The New York Tribune.

* See for post, postage paid on receipt of price.

JUST PUBLISHED. I. MISS INGELOW'S NEW STORY BOOK.

MISSING BROTHERS, Boston.

BONCHITIS AND ASTHMA.

By Robert M. M., Author of "Cathart and Throat Affections," &c. New ready. Price 25 cents. Will be sent by post. JAMES MILLER, Physician, No. 522 Broadway.

The following extract from this book will show its great value to those who are suffering from it:

"The Hunter on CONSUMPTIVE BONCHITIS."

This term is used to distinguish a form of consumption which closely resembles the consumption distinguished from it by a careful examination of the chest by the stethoscope. The rough and more continuous respiration in ordinary bronchitis is in particular troublesome in the morning, and is often accompanied by a rattling sound in the throat, as well as in the chest, and more commonly consists of a (slight) stridor or pectoral grates. It rarely sinks in water, being, as it were, suspended like a string of small oysters, and make their appearance in the sputa, and now and then cases occur in which it has a disagreeable smell as of rotting meat, while in other there is a fetor as of expectation, and the sputa are very thick and viscid.

There is not, as a rule, much pain in these cases, but sometimes the cough is violent, and then we find a feeling of soreness under the breast, and in the sides, particularly the right.

The disease is more frequent than in health, and each breath of shorter duration.

The pulse varies between 65 and 80 beats in the minute, which is from 15 to 20 beats less than in health.

The appetite is, as a rule, capacious; the sleep disturbed by dreams and broken by restlessness; and there is loss of both heat and strength.

The skin is pale, and the pulse is weak, and the surface of the body, and especially of the hands and feet, exposes them having this form of bronchitis to take cold easily. Whenever they do on, the expectoration becomes thicker, and the sputa are more copious, and the breathing more difficult. At such times, the expectoration has become like a thick mucus, and is described, but continues for a long time much more profuse than before the attack.
